

## Delivering Affordable Quality & Innovation for the Future

### Product Spot Light-Summer 2019 – Sinks

Dartford Composites Manufacture a wide range of products for the rail and transportation sector supplying the industry for 30 years.

Our Summer Spotlight Feature is on our sink range. We manufacture a range of standard and disabled toilet sinks for trains, working with our customer we can either produce to drawing or if drawings are not available reverse engineer from an existing sink example. The process involves creating a model and mould which are then used to produce an item for FAI (First Article Inspection).

The sinks pictured are from a new project this year where we are making 27 disabled and 42 standard sinks as part of a fleet refresh project.

All our products are certified to the correct fire ratings and conformity requirements for the railway together with having full product traceability from raw material batch to finished product.

Our processes enable us to offer a consistent high product standard that is cost effective and are warranted to last 10 years under normal wear and tear conditions.

If you would like further details on our sinks or any of our products please contact Ruth Silvester Tel 01332 350097
